

SETHOTHI PHALI

Full-Stack Developer | AI / Machine Learning | Cybersecurity

+266 57142672 | phalisethothi@gmail.com | Maseru, Lesotho | github.com/phali-hub

PROFILE

Final-year BSc Information Technology student at Limkokwing University of Creative Technology with hands-on experience across full-stack web development, Python-based security tooling, and applied AI/ML. Builds working software independently, from deployed websites to GUI security applications, and is deepening specialization in web exploitation and bug bounty research. Comfortable across Linux (daily-driver Parrot OS) and Windows environments, with strong self-directed learning and systems troubleshooting skills.

EDUCATION

BSc (Hons) Information Technology

Expected 2027

Limkokwing University of Creative Technology — Final Year

- Coursework spans software development, networks, databases, and information security.
- Repeating one module

TECHNICAL SKILLS

Languages: Python, JavaScript, HTML/CSS, SQL

Web / Full-Stack: Static & dynamic site development, GitHub Pages deployment, REST APIs, agentic coding tools

AI / Machine Learning: Applied ML fundamentals; integrating AI models (e.g. DeepSeek) into automated workflows and tooling pipelines

Security: Threat intelligence analysis, phishing analysis, wireless penetration testing, OSINT, bug bounty research (Bugcrowd, Intigriti, Synack)

Tools & Platforms: Git/GitHub, Tkinter (GUI development), Linux system administration (Parrot OS), Windows 11 / WSL, Docker, Kernel & driver-level troubleshooting

Other: OSINT research, CTF web-exploitation challenges

PROJECTS

Sigma Motors , Car Dealership Website

2026

- Designed and built a five-page static car dealership website, deployed via GitHub Pages.
- Currently modernizing the site with JavaScript enhancements using an agentic coding workflow.

URLhaus Threat Intelligence Analyzer

2026

- Built a Python desktop application with a Tkinter GUI that queries URLhaus threat data to help identify malicious URLs.

Phishing Analysis Agent

2026

- Developed a phishing analysis tool with a web-based interface for triaging suspicious messages/links.

Wireless Penetration Testing Toolkit Setup

2026

- Configured and evaluated wireless-auditing tools (wifite, airmon-ng) on Parrot OS for authorized penetration-testing scenarios.

INTERESTS & ONGOING DEVELOPMENT

- Preparing to compete on a team in a team-based Capture-The-Flag (CTF) competition (November 2026), specializing in web exploitation.
- Actively building a bug bounty research workflow (recon-assisted, human-verified submissions).
- Learning chess with a long-term goal of reaching Grandmaster-level play.
